

APPARELGUARD™

Detects magnet detachers and catches the shoplifters in the act.

Apparelguard uses a patented double-detection system to alert store staff that an illegal detacher is present in the store. Typically installed in the fitting rooms, the Apparelguard senses magnetic motion coming from an EAS tag being removed by the shoplifter, giving the store staff an opportunity to prevent the theft while the merchandise is still in the fitting room, far from the store exit.

Apparelguard is easy to install and maintain, and its software allows for tuning to different types of magnetic detachers, providing wide protection. It uses 3 dry relay contacts as alarm outputs, for light, sound, pager or CCTV. Additionally, API integration with an existing EAS controller is also available.

Key Benefits

- Highly effective at detecting magnetic detachers in fitting rooms
- The alarm allows the store personnel to stop theft before the shoplifter tries to flee
- Simple installation and operation
- API for easy integration with EAS (RF or AM)
- Can be tuned for different types of detachers
